## PhET Lab: Acid/Base Solutions

| Solutions | View <br> (draw ions) | Equation | Color of pH paper | pH | Strength of <br> Conductivity |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Water |  |  |  |  |  |
| Strong acid |  |  |  |  |  |
| Weak acid |  |  |  |  |  |
| Strong base |  |  |  |  |  |

## Discussion Questions:

1. Which ions are most abundant in an acid?
2. Which ions are most abundant in a base?
3. Which ions are most abundant in water?
4. How does the concentration of ions in a strong acid differ from a weak acid?
5. How does the concentration of ions in a strong base differ from a weak base?
6. Explain to someone in 3-4 steps how to use pH paper to determine the pH of a substance:

Step 1 -
Step 2-
Step 3-

## Custom Solution

1. Set Strength to a strong acid. Adjust the concentrations and record the pH of the solutions.

| Concentration | pH meter |
| :---: | :---: |
| 0.001 |  |
| 0.01 |  |
| 0.1 |  |
| 1 |  |

2. Set Strength to a strong base. Adjust the concentrations and record the pH of the solutions.

| Concentration | pH meter |
| :---: | :---: |
| 0.001 |  |
| 0.01 |  |
| 0.1 |  |
| 1 |  |

3. As concentration increases by a tenth, what happens to the pH ?
4. As concentration increases, what happens to the number of ions in the solution?
